

RESOURCE SHEET 2: BUILD A HABITAT DISPLAY

ANIMALS

VERTEBRATES

BIRDS

Jay

Woodpecker

Song thrush

Wood pigeon

Buzzard

Blue tit

Chiffchaff

Tawny owl

MAMMALS

Badger

Fox

Roe deer

AMPHIBIANS

Squirrel

Hedgehog

Bat

Toad

Newt

PLANTS

Dormouse

Shrew

Bank vole

Acorn

Ivy

Mosses and ferns

INVERTEBRATES

Snail

Purple emperor

Stag beetle

Woodlice

Ants

Ladybird

Bumblebee

Spider

Earwig

Millipede

Caterpillar

Worm

Slug

Answer each question and add the animals to your tree.

BUILD A HABITAT FOR WILDLIFE

An old tree was cut down to build a new road and many animals lost their home. Can you help Leafy to find them somewhere else

KEY STAGE
1&2

1 WHOSE TRACES?

Leafy has already found a few traces left by animals. Match the clues to the animals and add them to your tree.

2 SPY A BIRD

Using binoculars, Leafy has spotted a few birds looking for insects and worms. Find the mystery birds and add them to your tree.

- A small brown bird with spots on its chest
- A black and white bird with a patch of red under its tail, making a tap-tap-tap sound
- A blue, yellow, white and green bird

A large bird of prey is circling the sky on the lookout for a pigeon to eat.

Unscramble the word to identify it.

Dzazurb

Add both pigeon and bird of prey to your image.

3 A DARK, DAMP HOME

Leafy has left a pile of dead leaves by the tree to provide a home and food to small creatures. Complete the food chain and hide the animals amongst the leaves.

How would you describe their habitat? Circle the words.

Light, dark, wet, dry, warm, cold

4 MINIBEAST HUNT

A big log has been left on the ground for bugs to hide under and feed on dead wood.

Find these bugs and hide them around the log:

I have 6 legs so I am an insect,
I have an ear and a wig in my name,
My two long pincers look like a pair of tweezers.
WHO AM I?

I have 14 legs and a shell,
I have wood in my name,
I may look like an insect but crabs are my closest relatives.
WHO AM I?

5 AFTER DARK

When everyone has gone to bed, some animals come out looking for food. Who made these tracks in the night? Match each print to its animal and add them under your tree.

Leafy can hear 'hoo-hoo-hoo' in the night! Which bird has come looking for a small animal to eat? Hide this nocturnal bird on your tree!

6 GOOD SOIL

Worms help to turn dead plants and animals into rich soil. Good soil helps plants to grow.

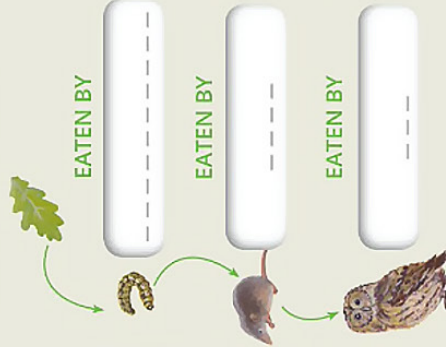

Make sure you add a worm to your soil.

Plants grow in the shade of the tree. Add them under your tree.

I look like a tiny, shiny worm,
And can curl up tight into a ball,
But unlike a worm, I have lots and lots of legs.
WHO AM I?

7 DINNER TIME

There is plenty of food for everyone. Fill in the blanks in the food chain below and add the missing creatures around your tree.

8 NEW TREES

Squirrels and jays help new trees to grow. They feed on acorns and often bury them for the winter. Some might be forgotten and grow into new trees.

Hide an acorn near your tree.
