

# SWITCHING TO RENEWABLE ENERGY

WWF

FOR  
YOUR  
WORLD

The way we heat and cool our buildings, the lighting we use, and the devices and appliances we plug in, all contribute to our energy footprint. Globally our energy consumption (power, heat and transport) is responsible for 66% of greenhouse gas emissions. And that demand for energy is increasing. However, renewable energy production is also increasing and with the technologies available today, Europe could be supplied 2.5 times over its current demand with renewable energy.

Switching to renewable energy is one of the easiest ways to reduce the emissions in your business. So, we are working with Big Clean Switch to help make it as easy as possible for you.

They are an energy comparison site that specialise in renewable energy. They compare prices from the UK's most trusted suppliers, so you get a great deal - and help the planet at the same time.

## THE WHOLE PROCESS IS A SIMPLE AND REQUIRES VERY LITTLE INPUT FROM YOU.

### DISCUSSING YOUR NEEDS

One of their team will talk through your needs so that they can find you the best tariff for your business. They also get your permission to speak to your current supplier to get information about your past energy use. This ensures they can give you an accurate quote.

### OUTLINING YOUR OPTIONS

They will source the best gas and electricity prices from their panel of trusted suppliers, then explain your options so you know exactly what you're committing to.

### MAKING THE SWITCH

Once you're happy, they will manage the switch process so you can relax, knowing that your business has a great energy deal and is doing its bit to help the environment.
