

FABRICE LEVEQUE - CLIMATE AND ENERGY LEAD AT WWF SCOTLAND

LONG

Fabrice has held several roles at global conservation organisation WWF, more recently joining as climate and energy policy lead at WWF Scotland in 2020. In this role, Fabrice is leading its advocacy work to tackle the climate emergency, with a particular focus on decarbonising Scotland's energy system.

Fabrice previously worked for Scotland's trade association for renewable energy, Scottish Renewables, leading their work on offshore wind and renewable heat. He has extensive knowledge of the renewable heat and electricity industries, having worked in a number of policy roles as well as designing and delivering small scale solar energy systems.

During his previous roles at WWF, Fabrice has successfully campaigned to secure a target that by 50% of all Scotland's energy should come from renewables by 2030, and worked extensively on heat network legislation and the UK Government's commitment to phase out coal power by 2025.

A political and policy specialist by training, Fabrice was inspired to try and help tackle climate change by the publication of the Stern Review in 2006 and a campaign to prevent a new coal fired power station being built at Kingsnorth.
