

SPRING

NATURE SPOTTER

Spring is a beautiful season as signs of new life start to appear. Increased light and warmth lead to unfurling leaves, budding flora, and busy wildlife!

Use our spotter sheet to **connect with your local environment** and **discover the amazing species** that call it home.

You can **screenshot the spotter page for later** and **tag us** in your adventures - we'd love to see what you spot!

SPRING NATURE SPOTTER

Daffodils

Swallows

Ladybird

Cygnets

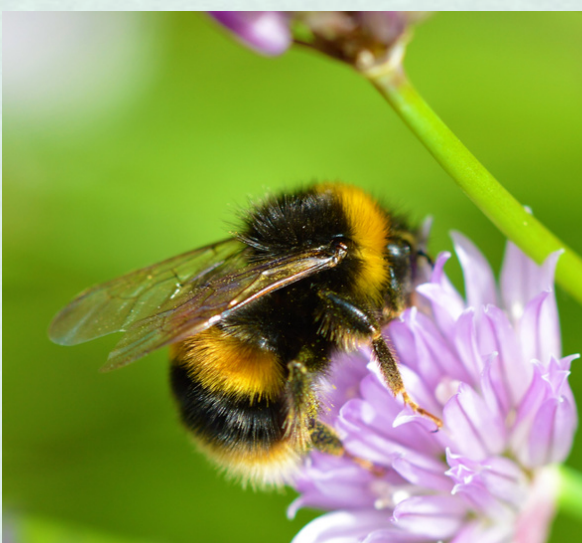

Blossoms

Tadpoles

Bird Nest

Bumblebee

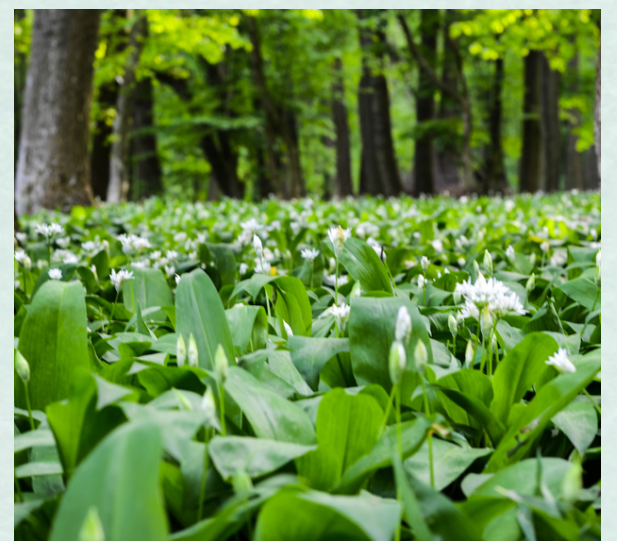

Late sunset

Common Blue

Alder leaves

Wild garlic*

*Wild garlic can look similar to toxic lily of the valley. If unsure, don't pick or eat.

SPRING

NATURE SPOTTER

Fun Fact:

Queen bumblebees are the sole survivors of the colony in winter. They emerge in spring to feed on nectar and pollen before seeking a nest site to raise a new generation.

Remember to respect nature by not disturbing it, and leave everything as you found it.
